## TRAINING OF PEDIATRICIANS

Unsigned article

From: Leningradskaya pravda [Leningrad Truth], No 山, 21 February 1952, Page 3

More than 2,000 skilled specialists were present for the twentieth anniversary of the Leningrad State Medical Institute of Pediatrics.

Established as an extension of the Institute for the Protection of the Health of Women and Children, this higher educational institution has in the past twenty years become the largest academic and scientific institution. It contains 40 chairs [departmental], and 25 clinics with special laboratories for teaching and scientific research.

Today the institute will graduate a large group of pediatricians, the first to be taught under the six-year plan. In the last semester the graduating students become practical assistants in the clinics of hospital pediatrics, children's diseases, children's surgery, and others.
